LRB vs RB (uniform interval check = 3, q=3, $[[3, 1, 2]]_3$): p-window around threshold

Legend:
- (RB(p), LRB(p)) p-order
- y = x
- $\varepsilon_{RB} \approx 0.04332$

X-axis: RB error rate (1 - fidelity)
Y-axis: LRB error rate (1 - fidelity)
